

1

From AI ambition to operational reality in 10 weeks

A fast-track to strategic AI value creation for mid-sized companies

Potential is not the constraint for mid-sized companies

Patterns we see why AI has not turned into value yet.

Competing priorities

Behind a broader change agenda

Limited view

On the what and the how

Early in maturity

Fragmented data and tech stack

No room to experiment

Disciplined budgets, no time

Some mid-sized companies got past it

4 recent examples, lifting the growth constraint of scarce talent.

Realizing up to 20% bottom line growth

Automotive	AI supported field service for technicians
------------	--

Construction	Bid management for calculators and tenders
--------------	--

Pharma	AI driven medication reviews for pharmacists
--------	--

Energy	Smart contracting for contractors
--------	-----------------------------------

What made it successful

- 1 Deliver strategic impact, fast**
Tied to strategic goals, measurable value in 2 to 3 months.
- 2 Reuse proven agents, feed them your knowledge**
Standard tooling plateaus. Your knowledge compounds.
- 3 Built into your systems, not beside them**
No parallel tool. It works where the work already happens.
- 4 Build capability via use cases**
Start where risk is low. Each use case speeds the next.

Re-use proven AI agents, fed with your knowledge

Our library of agents, including some examples.

Commercial	1			3
Supply chain		2		
Operations				
Service and support	4			
Back office				

1 Tender & pricing agent

2 Inventory planner

3 Sales assistant

4 Field service copilot

Knowledge is the asset

Your competitor can buy the same models.
They cannot buy or copy your unique knowledge.

In systems and documents

In people's heads, most of it not written down

Fast track to value, in three steps

A risk-managed route to production.

Fixed scope, fixed budget.

Scoping and sizing

1 to 2 days

Working prototype

2 weeks

Go or no go

Deliver, in production

8 to 10 weeks

Target payback period, 6 months

How we work with you

Your experts as starting point

Your people, your workflow

Your data, your knowledge

Your systems, your governance

AI as a means to accelerate

Software shell

Summaries and suggestions

Quick iterations with users

The generic part is fast. Your specifics make it work.
